

# Iman Sadafi Tehrani

## Senior Software Engineer / Technical Lead — Backend & Distributed Systems

Tehran, IR | sadafiiman@gmail.com | +98 912 836 8925 | [linkedin.com/in/iman-sadafi-tehrani](https://www.linkedin.com/in/iman-sadafi-tehrani) | [sadafiiman.github.io](https://sadafiiman.github.io)

---

### SUMMARY

Senior Software Engineer with 6+ years designing, building, and scaling production-grade backend systems across cloud-based and distributed architectures. Specialized in PHP (Laravel) and Python (Django), with strong expertise in microservices, RESTful APIs, event-driven design, and high-availability systems for healthtech, e-commerce, and reservation platforms. Proven track record progressing into a Technical Lead role, owning system architecture, mentoring engineers, and delivering scalable solutions in CI/CD-driven Agile environments. Experienced integrating AI agents and LLMs into production workflows to measurably improve efficiency.

### TECHNICAL SKILLS

**Languages:** PHP (Laravel), Python (Django), Node.js (TypeScript)

**Architecture:** Microservices, SOA, REST APIs, Event-Driven Design, SOLID, Design Patterns

**AI & Automation:** LLM Integration (OpenAI, Anthropic Claude), AI Agents, Workflow Automation (n8n), Prompt Engineering

**Database:** PostgreSQL, MySQL, MongoDB, Redis

**Messaging:** Kafka, RabbitMQ

**DevOps:** Docker, Kubernetes, OpenShift, Nginx, GitLab CI/CD

**Monitoring/Testing:** TDD, Unit/Integration Testing, Datadog, Grafana, Prometheus

### WORK EXPERIENCE

#### Senior Software Engineer — Doctoreto (*Healthtech, Doctor–Patient Platform*) | Jun 2026 – Present

- Architected and built a Laravel prescription integration microservice connecting the doctor portal to three national health insurance providers (Tamin, ERX, and Esakhad/Salamat), using OAuth 2.0 PKCE authentication and per-provider strategy/resolver design patterns.
- Integrated an AI agent into the prescribing workflow to auto-complete and validate prescription data, reducing prescription completion time by **3x** for doctors.
- Designed a provider-agnostic architecture using backed enums, DTO layers, and per-endpoint environment-keyed configuration to support future insurance providers without code duplication.
- Diagnosed and resolved production issues including authentication token cache-key collisions, WAF/bot-challenge interception of provider API calls, and Docker/queue-worker memory and configuration issues.
- Set up a PostgreSQL, Redis, and Prometheus/Grafana monitoring stack for observability and reliability at scale.

#### Senior Software Engineer — TehranMobile (*Room Reservation System Platform*) | Oct 2025 – Apr 2026

- Designed and implemented a multi-payment architecture supporting credit card payments, cash payments, and payment links, improving checkout flexibility and increasing reservation conversion rates.
- Developed new core booking features including reservation extension and cross-location booking, enhancing platform usability and customer experience across multiple venues.
- Optimized backend performance by improving database queries, indexing strategies, and data access patterns, resulting in reduced API response latency and improved system efficiency under load.
- Contributed to system scalability and reliability for a production reservation platform handling real-time booking operations.

#### Senior Software Engineer — Parspack (*PaaS Platform*) | Mar 2024 – Nov 2025

- Migrated application deployment architecture from a template-instance model to a Helm-based chart management system, improving deployment flexibility, scalability, and infrastructure consistency across environments.
- Designed and implemented an external image builder service to build customer source code and securely publish container images to a registry, enabling standardized, automated CI/CD build pipelines.

- Developed a real-time deployment monitoring system using WebSockets, providing live status updates for application builds, deployments, and runtime states.
- Built a pre-deployment validation service (TypeScript) to verify Git repositories, Docker configurations, and deployment readiness, preventing faulty releases from reaching production.
- Designed and implemented a microservice health-checking and monitoring system, improving system reliability and enabling early detection of service failures.
- Created an AI-assisted troubleshooting system leveraging build logs and Kubernetes pod logs to analyze failures and provide actionable insights for developers.

#### **Senior Software Engineer — Digikala** *(International Team, E-commerce Platform) | Dec 2024 – May 2025*

- Developed a scalable B2B e-commerce platform and admin system, enabling business clients to manage stores, products, and transactions through a centralized interface.
- Designed and implemented RESTful APIs for order orchestration, enabling external marketplaces (e.g., Wildberries, Megamarket) to automatically create, track, and manage orders within the Digikala ecosystem.
- Built a real-time inventory and pricing synchronization service, ensuring consistent product availability and price accuracy across third-party platforms and the core system.
- Engineered integration workflows to support high-volume cross-platform data exchange, improving operational efficiency and reducing manual order handling.

#### **Team Lead / Software Engineer — Irapardaz** *(AI & Data Processing Platform) | Feb 2021 – Mar 2024*

- Led development of a B2C AI-driven document processing platform, including pipelines for text-to-speech generation and handwritten document digitization.
- Improved system efficiency by **60%** through optimization of data validation and processing pipelines, reducing processing time and increasing throughput at scale.
- Designed and implemented a geo-tagging system mapping textual addresses to GPS coordinates using a hybrid approach combining structured data and crowd-sourced inputs.
- Managed and optimized large-scale data labeling and annotation workflows for AI training datasets, improving dataset quality and processing efficiency.
- Architected and implemented a text-to-speech processing pipeline for enterprise use cases, enabling scalable voice generation services across applications.

#### **Freelance Full-Stack Developer —** *(Hotel And Tour Reservation) | Jun 2019 – Feb 2021*

- Developed a hotel and tour management platform with real-time booking and availability updates.
- Implemented multi-tiered user access control for hotel administrators and tour operators.
- Built advanced search and filtering features, improving customer experience and engagement.

## LANGUAGES

---

Persian (Native) · English (Professional Working Proficiency)

## EDUCATION

---

**B.Sc. Computer Software Engineering** — Islamic Azad University, South Tehran Branch | 2016 – 2020

## CERTIFICATES

---

Cisco CCNA · CompTIA Network+ · MCITP: Windows Server 2012 · DevOps Beginners (Cando) · PHP Laravel Bootcamp (Maktab Sharif)

## HOBBIES

---

[Movie, Board Games, Gym, Online Multiplayer Games]

## REFERENCES

---

Available upon request.
